

# Deep Tech Lab - Quantum

Deep Tech Lab — Quantum's vision is to support world-class innovation by funding early-stage start-ups for the benefit of people and society.

DTL-Q has a fundamental role in the Danish quantum ecosystem, and we continuously work to strengthen Denmark's position as a leader within the field of quantum technology. DTL-Q is funded by The BioInnovation Foundation and co-located within the BioInnovation Institute in Copenhagen, which is Europe's largest life science accelerator.

## What we offer

A one-year program with an investment of 4 M DKK (~0.5 M EUR) as a convertible loan with no cap. We offer a world class program consisting of training, network, infrastructure and knowledge. We offer access to modern office space close to the center of Copenhagen and the chance to become a part of the Danish quantum ecosystem.

## Who can apply?

- Your technology must be within quantum or quantum-enabling technologies
- Your company must be incorporated in Denmark. Incorporation can happen after acceptance.
- Your company cannot have any prior commercial investment

## What we expect

Researchers with proven technology components, but a POC is not necessary. You know the product you intend to build. You know what market you aim to address. You have spoken with some potential customers who have expressed an active interest in the product you intend to build. You have a team who are willing to go full time should you be accepted into the program.
